Jose Ramirez Mora

Staff Engineer · product and platform

Staff engineer with 15+ years who owns product surfaces end to end and builds the platforms other teams depend on: frontend architecture, design systems, data access and release tooling. At Personio and DAZN I built design-system components and integration patterns that 4+ teams adopted, migrated five applications off a legacy monolith, moved a product domain's data access from legacy REST to the company GraphQL layer (5+ entities, 20+ endpoints retired), and cut p75 LCP 21% in production. Before that I designed a backend-for-frontend service and a logging library that became platform standards, and led full-stack teams for five years.

01 Experience

Staff Frontend Engineer

Oct 2025 — Present

Personio · Amsterdam, NL

HR platform for SMEs.

- Migrated my domain's data access off legacy REST onto the company-wide GraphQL layer: 5+ entities, 20+ endpoints retired, done incrementally alongside feature work with no dedicated project. Ended the dual data-access pattern that was driving architectural drift.
- Cut p75 LCP 21% in real-user monitoring across high-traffic surfaces by eliminating unused JavaScript and redrawing bundle boundaries.
- Defined and own the frontend integration model for company-wide groups management; shipped the first production use case to all customers; the pattern is now reused across 4+ product domains.
- Driving the connection of design-system components directly to product-domain data sources, so teams reuse one integration instead of re-wiring it: less duplication, stale API usage and UX drift.

Lead Frontend Engineer

Nov 2023 — Oct 2025

Personio · Amsterdam, NL

HR platform for SMEs.

- Led migration of 5+ applications off the legacy frontend monolith onto the modular stack, moving the domain from a slow, debt-accumulating codebase to one where features ship reliably.
- Owned frontend delivery of the central UI rebrand for my domain: 12+ stakeholders coordinated, a full-domain release with parallel UI to guarantee parity at launch.
- Designed reusable geolocation and mapping infrastructure (location services and UI components) used by multiple product teams without duplicating third-party integrations.
- Established the recurring frontend architecture forum for cross-team alignment and less implementation drift.

Staff Frontend Engineer

Apr 2022 — Oct 2023

DAZN · Amsterdam, NL

Global sports streaming.

- Designed and built governance tooling for the headless CMS architecture, letting multiple teams create and manage content models with consistent validation and version control.
- Drove the landing-pages micro-frontend toward Server-Driven UI on Next.js, decoupling layout control from frontend release cycles.
- Drove Design System adoption across 3+ frontend teams through guidance and code review: brand consistency, accessibility compliance, less per-team UI time.
- Optimized monorepo CI and standardized cross-team library releases, cutting manual publishing errors and version drift.

Senior Frontend Engineer

May 2021 — Mar 2022

DAZN · Amsterdam, NL

Global sports streaming.

- Led core design-system components and design tokens, establishing atomic component patterns adopted across web applications; standardized token naming.
- Built shared internationalization utilities (dates, times, currencies) used across product surfaces.
- Presented architecture proposals to the frontend guild and technical council.

Frontend Tech Lead

Jun 2019 — Apr 2021

Travix · Amsterdam, NL

Online travel agency.

- Aligned frontend architecture across 4+ product teams, consolidating common patterns into shared libraries and cutting duplicated implementation.
- Technically led a product team through development cycles; mentored engineers inside and outside the company.
- Performance guild member, shaping the organisation's frontend strategy.

Senior Frontend Engineer

Mar 2019 — Jun 2019

Travix · Amsterdam, NL

Online travel agency.

- Designed the backend-for-frontend service that became the standard adopted across the platform.
- Created the shared server- and client-side logging library that aligned logging standards company-wide.

Frontend Engineer

Mar 2018 — Mar 2019

Travix · Amsterdam, NL

Online travel agency.

- Set up frontend observability metrics and maintained the observability services written in Go; product team on cross-sell products.

Full Stack Team Lead

Jun 2013 — Dec 2018

First Factory · Heredia, CR

Nearshore software development.

- Led development teams for NYC clients, owning web-application architecture decisions across projects; mentored engineers across teams.
- Built 0-to-1 prototypes for mobile and web products, taking several into React, Angular and Node.js production applications.
- Contributed to practice-management software for healthcare providers (Angular, C#).

Software Engineer

2010 — 2013

GBSYS and 3WV · Costa Rica

- ASP.NET web applications and C# desktop software.

02 Skills

Frontend

TypeScript · React · Next.js · React Native · Design systems · Storybook · Testing (Jest) · Web performance (RUM, bundling)

Platform and tooling

Micro-frontends · Monorepo CI (GitHub Actions) · Release automation · Observability

Backend and data

Node.js · GraphQL · REST

Familiar

AWS · Docker · Terraform · Python

03 Projects

Storybook Paddings Addon

Contributor

An addon to preview components with different surrounding white space.

Storybook · Addon · React · Design · JSX

04 Education

Universidad Fidelitas

Apr 2008 — Apr 2011

Bachelor · Computer Science
